

RETRACTABLE AWNING OPERATING INSTRUCTIONS

1. OPEN AWNING

Align crank (A) with gear opening (B), never open awning all the way. When opening awning, fabric must be taut leaving a slight bend (D) in arm joints.

2. ADJUSTMENT

TO increase sun and rain protection, you can slope one or both ends of fall bar (E) by turning (C) gear opening with crank. **CAUTION: Do not force (overturn) the gear.**

3. TO CLOSE

Make sure front fall bar (E) is level (F) before closing.

4. WARNING

Close the awning every night or when leaving home or in extreme winds (more than 25 mph). **When the wind is moving the front bar more than 4" up and down – you must close the awning.**

5. RAIN WARNING

You can use the awning in light to medium rain, but the slope of the awning must be slanted (3.5" per foot – optimum, 2.5" per foot – passable) to allow water to run off. If awning has been installed with a slant less than 3.5" per foot, then, when raining, using your crank, adjust the pitch on one side so that water may run off. **Never allow water to accumulate on fabric (as arms can weaken and break).**

6. WARRANTY PROTECTION

Do not tie front fall bar (E) to deck or force crank (A) when making your slope adjustments.

7. FABRIC CARE

If closed wet, at first sunny day, open to dry (approx. 30 minutes). Fabric should be cleaned every 3 to 6 months as needed. To clean fabric:

- Hose it down with water (**WARNING: do NOT use a pressure washer**)
- Use lukewarm water in a bucket with a mild detergent (dishwashing liquid will do)
- Clean with a soft sponge or brush.
- Rinse with a garden hose
- Allow to dry

8. CRANK SIZE

When crank (A) is attached to gear opening (B) handle should be at your waist height. If your crank does not meet this criteria, we will gladly exchange.

WARRANTY :

Lifetime on frame

(10) ten years on fabric

(5) years on motor

Warranty is only applicable if awning is cared for and operated as per the instructions on this sheet.
